CALCULATING THE AMOUNT OF MOULDINGS CALCUL DES QUANTITÉS DE MOULURES CÁLCULO DEL NÚMERO DE MOLDURAS CÁLCULO DAS QUANTIDADES DE MOLDURAS

For mouldings: measure the perimeter of the room and add 10% to cover waste from cutting the corners.

For chair-rails and baseboards: measure the perimeter of the room less the width of any openings such as doors and windows. In that case, add 5% for waste.

Pour les moulures : mesurez le périmètre de la pièce et ajoutez 10% pour prévoir les chutes lors de la coupe des angles.

Pour les cimaises et les plinthes : mesurez le périmètre de la pièce moins la largeur des ouvertures telles que les portes et les fenêtres. Prévoyez dans ce cas des chutes de 5%.

Para las molduras: mida el perímetro de la habitación y añada un 10% para pérdidas con el corte de ángulos.

Para las cenefas y los zócalos: mida el perímetro de la habitación y reste la anchura de aberturas como las puertas y las ventanas. Prevea en tal caso una pérdida del 5%.

Para as sancas: meça o perímetro da sala e acrescenta 10% para prever perdas quando cortar ângulos.

Para os lambris e rodapés: meça o perímetro da sala e subtraia-lhe a largura das aberturas, tais como portas e janelas. Preveja neste caso uma perda de 5%.

ACCLIMATISATION | ACCLIMATATION | ACLIMATACIÓN | ACLIMATAÇÃO

EN: To avoid expansion or shrinkage of the mouldings due to variations in temperature and humidity, it is essential to leave them in the room you plan to install them for 24 hours prior to installation. Be sure, also, to avoid subjecting them to excessive variations in temperature between storage and installation, and to maintain a constant humidity level.

FR : Pour éviter l'expansion ou la rétraction des moulures dues aux variations de température et d'humidité il est primordial, 24h avant de commencer l'installation, de les entreposer dans la pièce des travaux. Veillez également à éviter les différences de température trop importantes entre le stockage et l'installation, ainsi qu'à garder une humidité constante.

ES: A fin de evitar la expansión o la retracción de las molduras a causa de las temperatura y la humedad, es imprescindible almacenarlas, 24 horas antes de iniciar la instalación, en la habitación donde éstas serán instaladas. Trate de evitar, así mismo, grandes diferencias entre la temperatura de almacenaje y la temperatura de instalación y procure que el grado de humedad sea constante.

PT: Para evitar a expansão ou a retracção das sancas devidas às variações de temperatura e de humidade, é primordial, 24 horas antes de temperatura demasiado importantes entre o local de armazenamento e o de insalação bem como manter uma humidade constante.
